DETAILED ACTION

Prosecution Reopened

1. Prosecution is reopened in view of the newly issued patent to Futamoto et al. (US 6686070) filed Nov. 22, 2000. The Examiner apologizes for the inconvenience. An Office action on the merits follows.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 16 recites the limitation "the bottom and the top ferromagnetic layers" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an

international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-9, 11-12, and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Futamoto et al. (US 6686070).

Futamoto et al. disclose a magnetic recording medium having a substrate, an antiferromagnetic layer formed from a material such as FeMn, a multilayered underlayer formed from at least two ferromagnetic layers antiferromagnetically coupled across a nonmagnetic spacer layer, a nonmagnetic intermediate layer thereon and a perpendicular magnetic recording layer (see Figures 1-2; col. 5, lines 19-43; col. 6, lines 9-20; col. 7, lines 7-8; col. 13, lines 43-60; col. 14, Table 3).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 13, 15-24 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Futamoto et al. (US 6686070) in view of Coughlin (US 5861220).

Futamoto et al. teach all of the limitations of the claims as detailed above except for the radial orientation of the ferromagnetic underlayers. Instead, Futamoto et al. teach the

Art Unit: 1773

circumferential orientation of the ferromagnetic underlayers in order to reduce spike noise generated by the soft magnetic underlayer.

Coughlin teaches that a soft magnetic keeper layer is formed having either a circumferential or radial orientation in order to reduce noise generated by the soft magnetic layer (see abstract, Fig. 6, and col. 2, lines 46-50).

It would have been obvious to one of ordinary skill in the art at the time of invention to provide soft magnetic underlayers having radial orientations instead of circumferential orientations in view of Coughlin's teaching of the equivalence of circumferential and radial orientation of a soft magnetic keeper layer.
